15 February 2026 at 22:11

Hi Natasha

I am writing with regards to 2 recent Instagram reels on ZData which you recently posted which has gathered a growing number of views, saves and shares.

These posts have caused serious brand impairment to ZDATA, and is libellous, tantamount to being classified **fake news**.

For someone promoting tech literacy and credibility, allow me to point out a few things

1) **ZData statement** on 11 Feb clearly stating that it is occupying the smallest parcel of land in the park with minimal activity and it is using 100% reclaimed water (not potable water) - which was glossed over in your posts. In fact, you went on to imply that other data centres are doing this but they are not.

Please see this announcement made in August 2025: [IWK and JSW collaborate to provide reclaimed water to meet growing data centre needs | The Star](#) - ZData is one of the first 4 companies to sign an MOU with IWK to use recycled water.

Not quite sure where you also retrieved the volume of water / day required by ZData....

2) A **Media statement by YB Datuk Pandak Ahmad**, State Assemblyman for Kota Iskandar, at a Townhall he called on **12 February**, with local several resident association heads, contractors and developer. **The issue of dust pollution has been attributed to the Master Developer, Tropicana Firstwide**, which has since been directed by YB to take **immediate remedial actions**.

See here: <https://www.businesstoday.com.my/2026/02/14/johor-data-centre-protest-that-went-global-tropicana-pledges-to-clean-up-act/> and media which has covered this.

It is misleading to state that **ZDATA** is the culprit for the dust pollution when it was actually the Master Developer who was responsible!

3) Do review **this article by W.Media** - about the **placement of data centres in commercial and industrial lots**, calling for the **state authority** to clarify the matter. [\[Opinion\] Revisiting the first data center protest in Malaysia – w.media](#)

By the way - if you wish to authenticate the original news story re the protestors, do reach out to [Ram Anand | LinkedIn](#) to find out what actually transpired that evening and if he was on site to file the report. Speak with the local residents - were there really 50 people at the protest? Was this politically linked?

Given the implications of the grave misinformation, I'd like to request that we get on a **call on Monday morning** to discuss **immediate remedial actions** - and if you need further clarification on the situation in Gelang Patah.

I trust you will do what is **responsible**, given the lengths you go to produce "**well-researched content**" to inform your readers - as you repeatedly claim... that tech literacy is so important, and credibility matters.

Please drop me a note to schedule this - and do invite the co-founders of Ragtech as well to join in the call.

Kind regards,
Sheila Jaya Poomy
Ceria Communications
On behalf of ZDATA

15 February 2026 at 23:35

Dear Sheila,

Thank you for reaching out regarding our recent Instagram content covering the Gelang Patah data center protest. I appreciate the opportunity to address your concerns and provide clarity on the sources and context behind our coverage.

Before I address the specific points you raised, I want to acknowledge something important: **we are likely on the same side of many critical issues**. I noticed from your LinkedIn profile that you advocate for causes like child safety online—an area where ragTech is also deeply committed through our FutureNet research initiative. We share a common mission: using technology responsibly and ensuring it serves communities rather than harms them.

This is why I find this situation particularly concerning. ragTech is a small educational initiative run by tech advocates who believe in transparency, accountability, and tech literacy. We're not anti-technology or anti-data centers—we're advocating for responsible development that considers community impact. This aligns with the values I see reflected in your own advocacy work.

Turning against small advocacy groups like ragTech for reporting on matters of public interest seems antithetical to the work you do. We're both fighting for a more responsible tech ecosystem. The difference is that we're highlighting concerns about a specific project's community engagement and transparency, while you're representing that project's interests.

I hope we can approach this dialogue as fellow advocates who share common values, rather than as adversaries.

Our Commitment to Accuracy

At ragTech, we are committed to tech literacy and credible journalism. Our content is based on publicly available news sources, official government statements, and technical research. I want to address each of your concerns systematically with references to our sources.

Note: We have produced two pieces of content on this topic:

1. **First video:** General coverage of the Johor data center protest and broader industry context
2. **Second video:** Specific analysis of ZData's project based on publicly available information

I will address your concerns for both pieces of content below.

Addressing Your Specific Concerns

1. Water Usage and Reclaimed Water

Your Concern: We glossed over ZData's use of 100% reclaimed water and implied other data centers are not doing this.

Our Position:

In our short-form video script, we stated: *"This facility will consume up to 50 million liters of water per day" and "data centers need potable water."*

Our Research Process:

When we conducted research for this content, we performed extensive internet searches using keywords including "ZData," "Johor," "data center," and "water." **The search results did not prominently yield information about ZData's use of reclaimed water.**

The sources that appeared in our research were:

- News articles about the protest (Lowyat.NET, w.media, SCMP, The Business Times)
- General reporting on Johor's data center boom and water concerns
- Industry articles about data center water consumption in the region

Your February 11, 2026 statement regarding reclaimed water was released **one day before we posted our video on February 12, 2026**. Given this timeline, it would have been nearly impossible for us to incorporate this information into our content, which was already researched and produced. The August 2025 IWK-JSW MOU, while published months earlier, was not prominently featured in search results at the time of our research.

As a communications specialist, Sheila, I'm sure you recognize this as a significant communication gap. If reclaimed water usage is a key differentiator and sustainability achievement for ZData, this is valuable feedback for improving their public communications strategy:

Recommended Communications Improvements:

- **Proactive messaging:** Sustainability initiatives should be communicated to the public and media **before** issues arise, not as reactive damage control after protests
- **Discoverability:** Key differentiators like reclaimed water usage should be prominently featured in easily searchable channels (website, press releases, social media)
- **Consistent messaging:** Environmental commitments should be part of standard public communications from the beginning of the project, not disclosed only when challenged

Timing Reality:

Releasing a statement on February 11 and expecting content creators to incorporate it by February 12 is unrealistic—especially when major news media agencies like The Star and SCMP were reporting on the same issue without access to this information either. This suggests a broader communications challenge that could benefit from your expertise.

This is an opportunity for ZData to strengthen their communications strategy rather than focusing resources on threatening small advocacy groups who are reporting based on publicly available information.

Our Position:

- Our research cited the general water consumption of **Tier 1 and 2 data centers** in Johor (up to 50 million liters/day), as reported in multiple news sources discussing why Johor halted approvals for new Tier 1 and 2 facilities
- **State officials have not disclosed what tier ZData's facility falls under**, as confirmed by the South China Morning Post: *"There are also lingering concerns about the water demands of the Zdata project. Johor last year stopped approving Tier 1 and 2 data centres due to their high usage of water – up to 50 million litres of water a day. State officials have not disclosed what tier Zdata's facility falls under. Its approval was granted before the new ban was instituted."*
- Without knowing the tier classification, it was impossible for us to determine ZData's specific water consumption or requirements
- We acknowledge that our short-form script did not specify that ZData is using reclaimed water—**because this information was not readily discoverable through standard research methods, and the tier classification remains undisclosed**
- In our full drafted blog post, we do mention: *"Some data centers use 'gray water' (recycled wastewater) or seawater cooling in specific configurations, but these require substantial additional infrastructure"*—acknowledging that alternatives exist

What We Will Do:

- We will add a clarification to our published content acknowledging ZData's use of reclaimed water as stated in your February 11 announcement and the August 2025 IWK-JSW MOU
- We will clarify that the 50 million liters/day figure refers to Tier 1 and 2 data centers generally, not ZData specifically

What ZData Should Consider:

If ZData's use of reclaimed water is a significant sustainability achievement (which it is), this information should be:

- Prominently featured on your website
- Included in all press releases and public communications
- Easily discoverable through basic internet searches
- Proactively communicated to the community before protests occur

The fact that this information only came to light in your February 11 statement—**after** the protest—suggests a communication failure, not a research failure on our part.

Request for Clarification:

Since state officials have not disclosed ZData's tier classification, **we would like to use this opportunity to request that ZData confirm your facility's tier status**. This information would help:

- Clarify the actual water consumption requirements for your facility
- Allow us to provide more accurate context in our coverage
- Demonstrate ZData's commitment to transparency
- Help the public better understand the project's environmental footprint

If ZData is willing to share this information, we will gladly incorporate it into our clarifications.

Sources Referenced:

- [IWK and JSW collaborate to provide reclaimed water to meet growing data centre needs - The Star, August 13, 2025](#)
- [Johor halts approvals for new Tier 1 and 2 data centers - Lowyat.NET, 2025](#)

2. Dust Pollution Attribution

Your Concern: We implied ZData is the culprit for dust pollution when it was actually Tropicana Firstwide (the master developer).

Our Position:

In our script, we stated: *"These weren't tech activists or environmentalists—just everyday people who couldn't dry their laundry outside anymore because of construction dust."*

Clarification:

- We did not explicitly attribute the dust pollution to ZData in our short-form video.
- We reported on the protest and the residents' concerns about "construction dust" at the data center site.
- The official Media Statement by YB Datuk Pandak Ahmad (February 12, 2026 Townhall) confirms:
 - "The main issues raised were dust pollution during construction works"
 - "Tropicana Firstwide is still carrying out earthworks"
 - "Phase Two of the ZDATA data centre building is nearly complete, with remaining works generating little dust"

Important Note on Responsibility:

While the official statement attributes dust pollution to Tropicana Firstwide (the master developer), it's worth noting that **contractors and subcontractors typically operate under the developer's purview and oversight**. Whether it's ZData's own contractors or the master developer's contractors, the project developer bears responsibility for managing construction impacts.

Furthermore, ZData's AIIB loan application commits to addressing grievances, including those related to construction impacts. The AIIB Environmental and Social Management System (ESMS) document states that environmental impacts during construction include *"generation of air (dusts/particulates and gaseous), noise pollution, and waste"* and requires a Stakeholder Engagement Plan (SEP) with grievance mechanisms.

If ZData has implemented a grievance redress mechanism as committed to in the AIIB loan, we would welcome information on:

- When it was established
- How residents were informed about it
- How many grievances have been received and addressed
- Why residents felt the need to protest if such a mechanism existed and was functioning

What We Will Do:

- We will add clarification that the dust pollution was primarily attributed to Tropicana Firstwide's earthworks, as confirmed by the official government townhall statement
- We will note that ZData's Phase Two construction is nearly complete with minimal dust-generating activities remaining
- We will acknowledge that contractor oversight and grievance mechanisms are typically the developer's responsibility

Sources Referenced:

- Media Statement by Datuk Pandak Ahmad, State Assemblyman for Kota Iskandar (February 12, 2026)
 - [Johor data centre protest that went global: Tropicana pledges to clean up act - Business Today, February 14, 2026](#)
-

3. The Protest Itself

Your Concern: Questioning whether there were really 50 people at the protest and suggesting it was politically linked.

Our Position:

We reported: *"On February 7th, over 50 residents protested outside a data center construction site in Gelang Patah."*

Sources:

- **Official Government Statement:** Media Statement by YB Datuk Pandak Ahmad (February 12, 2026): *"Approximately 50 residents attended the session, including Abdul Rahman Halim, Village Head of Kampung Pulau Gelang Patah, and Ramli Paiman, Chairman of the Residents' Action Committee on the Data Centre."*
- [Malaysia Witnesses First AI Data Centre Protest In Johor - Lowyat.NET](#)
- [Johor's data center protest, a first in Malaysia - w.media](#)
- [Malaysia draws first data centre protest over pollution, water - The Business Times](#)
- [Malaysia's data centre boom faces backlash as residents protest over dust, water woes - South China Morning Post](#)

The official government statement confirms approximately 50 residents attended. The SCMP article further corroborates: *"More than 50 people gathered in front of a data centre construction site close to a residential area in the southern state of Johor, demanding an end to dust pollution and compensation for any negative impact that the project might have on their health."*

We reported what was documented by multiple news outlets and confirmed by government officials.

Addressing Our Second Video (ZData-Specific Analysis)

Our second video focused specifically on ZData's project and raised concerns based on publicly available documentation. Here are the claims with full sources:

Claim 1: Stop-Work Order in 2025

Our statement: "In 2025, authorities issued a stop-work order for poor construction standards."

Source: [w.media - Johor data center ordered to stop work, a first in the state](#)

The article confirms: *"A data center site in Iskandar Puteri, Johor, has been ordered to stop work, the first time in the state, following numerous complaints... The stop order was issued under the Streets, Drainage and Building Act 1974 (Act 133) for breaches involving dirty roads, earthworks,*

construction activities at unreasonable hours and the lack of any hoardings despite the project having started six months ago."

State housing and local government committee chairman Jafni Shukor conducted a site visit and was seen talking to a ZData representative. Contractors were given two weeks to comply with five conditions including installing hoardings, halting earthworks, stopping night operations, and keeping roads clean.

Claim 2: AIIB Loan Application Acknowledges Environmental Impacts

Our statement: "Their own loan application to the Asian Infrastructure Investment Bank states their projects will have 'heavy requirements of water and electricity' and generate 'dusts and particulates' during construction."

Source: [AIIB - China: Project Forest](#)

The official AIIB project document states:

- *"Potential equity investment of up to USD40 million in ZData as part of their Series C funding round"*
- **Environmental impacts during construction:** *"generation of air (dusts/ particulates and gaseous), noise pollution, and waste"*
- **Environmental impacts during operations:** *"the likely adverse impacts of the Project will be largely due to its heavy requirements of water and electricity"*

This is ZData's own disclosure to a multilateral development bank, not our characterization.

Claim 3: Financing Issues - \$40M AIIB + \$500M Private Debt

Our statement: "Zdata applied for a 40 million dollar loan and was seeking 500 million in private debt—both while actively building."

Sources:

- **\$40M AIIB equity:** [AIIB - China: Project Forest](#) - "Potential equity investment of up to USD40 million"
- **\$500M private debt:** [The Business Times - Chinese data centre firm Zdata seeks US\\$500 million private loan for Malaysia project](#)

The Business Times reports: *"Chinese data centre firm Zdata Technologies is seeking private debt of around US\$500 million to fund a project in Malaysia... The company plans to use the proceeds for a data centre buildout in the southern Malaysian state of Johor."*

Claim 4: Grievance Redress Mechanism Commitment

Our statement: "Their loan commits them to a Grievance Redress Mechanism for community concerns. Yet when 50 residents protested, they got a defensive PR statement."

Source: [AIIB - China: Project Forest](#)

The AIIB document requires: *"As part of the ESDD, a Stakeholder Engagement Plan (SEP) will be prepared and incorporated in the ESMS [Environmental and Social Management System]."*

AIIB's Environmental and Social Standards (ESS1) require stakeholder engagement and grievance mechanisms. This is a standard requirement for AIIB financing.

Again, as mentioned above, if there was a grievance redress mechanism as committed to in the AIIB loan, we would welcome information on:

- When it was established
- How residents were informed about it
- How many grievances have been received and addressed
- Why residents felt the need to protest if such a mechanism existed and was functioning

Claim 5: Proximity to Residential Areas

Source: SCMP confirms: *"Located less than a kilometre (about half a mile) from the closest homes"*

The w.media article on the stop-work order also notes: *"A residential area was also seen about 50 meters away."*

Our position: Every claim in our second video was based on publicly available documentation from credible sources including:

- Official AIIB loan documents
- Major news outlets (The Business Times, w.media, SCMP)
- Government actions (stop-work order)

This was fair commentary on a matter of public interest, supported by verifiable facts.

What We Did Right

Our coverage accurately reported:

1.  **The protest occurred** - Confirmed by multiple news sources and official government statements
2.  **Approximately 50 residents attended** - Confirmed by YB Datuk Pandak Ahmad's official statement and SCMP
3.  **Residents' concerns about dust, air quality, and water** - SCMP reports: *"Johor residents say they cannot dry laundry on their balconies any more, while air purifiers signal dangerously poor levels of air quality"*
4.  **Residents represent nearly 1,000 people across four housing estates** - SCMP: *"Those gathered say they represent nearly 1,000 residents strewn across four housing estates in the Gelang Patah district"*
5.  **This was Malaysia's first data center protest** - Widely reported across media
6.  **Facility location less than 1km from homes** - SCMP confirms this unusual proximity
7.  **Global context of data center opposition** - Properly cited sources (Guardian, Truthout)
8.  **Technical explanation of why data centers require significant water** - Based on industry standards and engineering principles
9.  **Malaysia as Southeast Asia's data center hub** - SCMP: *"Malaysia has emerged as Southeast Asia's main data centre hub, attracting companies from Oracle and*

What We Will Correct

To maintain our commitment to accuracy, we will:

1. **Add a clarification** that ZData is using 100% reclaimed water, as stated in your February 11 announcement and the August 2025 IWK-JSW MOU
 2. **Clarify** that the 50 million liters/day figure refers to Tier 1 and 2 data centers generally, not ZData specifically
 3. **Add attribution** that dust pollution was primarily from Tropicana Firstwide's earthworks, as confirmed by the official government townhall
 4. **Note** that ZData's Phase Two construction is nearly complete with minimal dust-generating activities
-

Our Editorial Standards

ragTech's coverage was based on:

- **Multiple credible news sources** (Lowyat.NET, w.media, The Business Times, The Star)
- **Official government statements** (Media Statement by YB Datuk Pandak Ahmad)
- **Technical research** on data center operations and water requirements
- **Global context** from international sources

We did not fabricate information or create "fake news." We reported on a newsworthy event using publicly available information from credible sources.

A Note on Proportionality

Before addressing next steps, I want to respectfully point out a concern about proportionality.

ragTech is a **community initiative** run by tech advocates committed to tech literacy and education. We are not a major media organization with legal departments and substantial resources.

Yet the sources we cited include:

- **South China Morning Post** - Major international news outlet
- **The Business Times** - Leading regional business publication
- **Lowyat.NET** - Established Malaysian tech news site
- **w.media** - Specialized data center industry publication
- **The Star** - Malaysia's major English-language newspaper

If ZData believes there is "serious brand impairment" and "libellous" content warranting legal action, these larger news organizations published the same information—often with more reach

and visibility than our content. The SCMP article alone has significantly more readership than our Instagram reels.

Why target a small advocacy group rather than addressing concerns with these major news outlets first?

We are committed to accuracy and willing to add clarifications where appropriate. However, the approach of threatening legal action against a small educational initiative while larger media organizations report the same facts raises questions about the intent of this outreach.

Moving Forward: Our Position

What We Will Do:

1. **We will publish clarifications** as outlined above:
 - ZData's use of reclaimed water (per your February 11 statement and August 2025 IWK-JSW MOU)
 - Clarify that 50 million liters/day refers to Tier 1 and 2 data centers generally
 - Attribute dust pollution primarily to Tropicana Firstwide's earthworks
 - Note that ZData's Phase Two construction is nearly complete with minimal dust-generating activities
2. **We will reach out to Ram Anand** (as you suggested) to verify details of the original protest coverage
3. **We will continue covering this story** with updated information as it becomes available, as data center development is a matter of significant public interest
4. **We are happy to continue dialogue via email** to ensure accuracy and address any specific factual concerns

What We Will Not Do:

1. **We will not retract factually accurate reporting** based on credible news sources, official government statements, and publicly available documents (including ZData's own AIIB loan application)
2. **We will not remove content** that constitutes fair commentary on matters of public interest
3. **We will not cease coverage** of data center developments in Southeast Asia and their environmental and social impacts

Regarding the Proposed Monday Call

I must respectfully **decline the Monday morning call** as proposed. Here's why:

Timing Concerns:

- Your email arrived at 10pm on Sunday evening
- You're requesting a call on Monday morning—giving less than 12 hours notice
- Chinese New Year holidays are this week, making this particularly rushed timing
- We respect your time and hope you extend the same courtesy to us

Legal Considerations:

- Your email contains serious allegations: "libellous," "tantamount to being classified fake news," and references to "grave misinformation"
- These are legal threats that require proper consideration
- **I need time to consult with legal counsel** before any substantive discussion, given the nature of your allegations
- Rushing into a call under these circumstances would be imprudent

Preferred Approach:

I propose we continue this dialogue via email for now. This allows:

- Both parties to carefully consider and document positions
- Time for me to consult appropriate counsel given your legal allegations
- A more measured and productive exchange
- Proper review of any additional documentation you wish to provide

If a call is still desired after email exchanges, I would be happy to schedule one for **after Chinese New Year**, giving both parties adequate time to prepare and consult advisors as needed.

For Immediate Email Dialogue:

Please provide:

1. **Specific factual inaccuracies** you believe exist in our coverage (with supporting documentation)
2. **Your preferred corrections** (we will evaluate based on evidence provided)
3. **Any additional context** you believe is missing from our coverage
4. **Confirmation** that you are also addressing the larger news organizations that published similar content

We will review and respond to each point systematically via email.

Regarding the Draft Blog Article:

If you are satisfied with the corrections proposed in this email, I will proceed to make the outlined changes to our draft blog article. Before publishing, I will send the updated draft to your team for review to ensure the clarifications accurately reflect the information you've provided (regarding reclaimed water usage, dust attribution, etc.).

This collaborative approach will ensure:

- Factual accuracy in our published content
- Fair representation of ZData's sustainability initiatives
- Transparency in our editorial process
- An opportunity for your team to verify the corrections before publication

Please confirm if you would like to proceed with this approach.

Legal Considerations

Your email contains serious legal allegations:

- "Libellous"
- "Tantamount to being classified fake news"
- "Grave misinformation"
- References to "serious brand impairment"

I must respectfully but firmly disagree with these characterizations:

Our Legal Position:

1. **Truth is a complete defense to defamation** - Our reporting was based on:
 - Publicly available information from credible news sources
 - Official government statements and documents
 - ZData's own disclosures to the Asian Infrastructure Investment Bank
 - Government regulatory actions (stop-work order)
2. **Fair comment on matters of public interest** - Data center development, environmental impact, and community concerns are legitimate matters of public interest and concern
3. **No malicious intent** - We reported in good faith based on extensive research and multiple credible sources
4. **No fabrication** - Every claim in both videos is supported by verifiable documentation from credible sources
5. **Journalistic standards met** - We cited sources, reported factual events, and engaged in fair commentary

Given These Legal Allegations:

I will be consulting with legal counsel before any further substantive discussions. This is a prudent and necessary step given the serious nature of your allegations.

Threatening legal action against a small educational initiative for reporting factual information from credible sources is a significant escalation. We take it seriously and will respond appropriately with proper legal guidance.

Conclusion

I appreciate your outreach and the opportunity to address your concerns. However, I must be clear about our position:

ragTech is committed to accuracy, and we will make the specific clarifications outlined above where our coverage lacked important context (particularly regarding ZData's use of reclaimed water and attribution of dust pollution to the master developer).

However, we will not retract factually accurate reporting of a newsworthy event that was:

- Widely reported by major credible media outlets (SCMP, The Business Times, The Star, Lowyat.NET, w.media)
- Supported by publicly available documents including ZData's own AIIB loan application
- Documented by government regulatory actions (stop-work order)

Our coverage—both videos and written content—was based on extensive research, multiple credible sources, and publicly available documentation. It constitutes fair commentary on matters of significant public interest.

Given the legal allegations in your email, I will be consulting with counsel before any call. I respectfully decline the rushed Monday morning timeline and propose we continue via email, with a potential call scheduled after Chinese New Year if still needed.

For immediate email response, please provide:

1. Specific factual inaccuracies with supporting documentation
2. Your preferred corrections (with evidence)
3. Any additional context or documentation
4. **Confirmation of ZData's tier classification** (Tier 1, 2, 3, or 4) to help us provide accurate water consumption context
5. **Information about grievance redress mechanisms:** When established, how residents were informed, how many grievances received/addressed
6. Confirmation of your approach with the larger news organizations that published similar content

I look forward to a productive dialogue via email.

Respectfully,

Natasha

Co-founder, ragTech

natasha@ragtechdev.com

Note: This email and all subsequent communications regarding this matter are being documented and retained for our records, given the legal allegations raised.
